

**MONTHLY RAINFALL FORECAST STUDY IN SOUTHEASTERN BRAZIL
USING MULTI-LAYER PERCEPTRON (MLP) NEURAL NETWORKS**

Cleber Souza Corrêa, Diogo Machado Custodio, Haroldo de Campos Velho

ABSTRACT

This work uses the MLP neural network technique to make monthly rainfall forecast estimates for Guarulhos airport in southeastern Brazil using a time series of approximately 70 years. Neural network structures with two or more hidden layers showed a better result, minimizing the prediction error.
